

P365 AXG/AXG Legion CCW Magwell Installation Instructions

Check our website at jawbonetactical.com for more info.

If you can't figure this out, then you need to take it to a gunsmith. There is no shame in that, some people are mechanically inclined, some are not. If you destroy your grip module, damage the magwell, or cross-thread the screw, tough luck. You should have taken it to a gunsmith. Jawbone assumes no responsibility for damage done to anything due to negligence or inability to put a screw in a hole. If you have any questions about it, feel free to call or contact us through our website.

***The grip module you bought probably came with a magwell already installed, if you managed to remove that, then this should be a piece of cake. It installs/uninstalls the exact same way.

If you are confident in your ability to handle this installation (then you really shouldn't need instructions, but here they are anyway):

1. Make sure your gun is unloaded.
2. Make sure it is compatible with this magwell. If you're not sure, you probably didn't read the description when you ordered it.
3. Hook the lip on the front of the magwell into the slot at the front of the grip. Then lever it back till it fits flush.
4. Once it fits flush on the bottom of the grip, install the provided M3 screw (feel free to use some blue Loctite if you want). This is a small screw with fine threads, don't go crazy. 8-10 in-lbs is plenty of torque.
5. Verify that it's fitting flush, and that your magazines still fit in the gun.
6. Go shoot.
